Dear Friend,

Some time ago you expressed interest in our automatic badminton feeding machine. This is to inform you that now, after over four years in development, we have finished our first production model and others are in preliminary assembly stages.

The machine has gone through much revision to create a product that would be as simple and reliable as possible, yet perform essentially every function a coach who is feeding shuttlecocks could do...and more.

The machine will precisely:

- >Clear
- >Drive
- >Drop
- >Serve
- >Smash
- >Net(dink)

Controls include speed (distance), rate (shuttles per minute) and a wireless on/off switch.

The unit is lightweight and portable. The base is a cart on casters, and the carrousel holding the shuttles removes easily for refilling. The machine (weighing only 25 lbs.) lifts off a pedestal mounted to the top of the cart for portability.

The unit doubles as a training station for serving by removing the machine from the table pedestal and replacing it with an adapter that the carrousel can then be mounted to(See model to right in photo). By placing the cart with the mounted carrousel holding the shuttlecocks next to the server, hundreds of birds are within easy reach for practice.

The carrousel holds 250 plastic or feather shuttlecocks. Additional carrousels are available as an option so that while the machine is running, another carrousel can be filled to be ready when the first is empty. This can create non-stop feeding. A special telescoping rake is included to permit gathering the birds into a pile for easy reloading of the carrousel.

This is a beautiful device and fascinating to watch operate. Its body is made of clear space age polymers which permit direct viewing of all operations. Everything is also modular so that if repair is needed, parts can be easily removed for service or replacement.

Processing*

Each machine is individually hand-crafted and guaranteed for one year, parts and labor, for any defect other than normal wear.

Medical

Price: \$3,795.00 plus shipping (compare to the only other one we know of that is being made [in Europe] for \$15,000!). This is a special introductory offer and does not begin to cover manufacturing and development costs. We offer it out of a love for badminton and the belief that it can do much to advance the sport.

Veterinary

If there is significant interest in the machine, we have also developed a computer controlled prototype permitting programming of an infinite array of drills. But this machine will not be taken into production until it is clear that there is the level of demand justifying its final engineering and manufacture.

Club owners, rent it by the hour and it will pay for itself over and over. This is not to mention its ability to train players rapidly so that their enthusiasm for the sport is greatly fanned. Also consider the possibilities with contests using the machine, or the ease for coaches to train youngsters or new enthusiasts. For the advanced player or novice alike, this is a totally unique tool that can greatly enhance skills in a short period of time.
